

QUICK LOOK. GREAT INSIGHTS.

Discover VisualBI, a data analytics solution for executives, which helps you to overview your company.

VisualBI is a data analytics software for small to mid-sized companies. It is currently in the early stages of development, once it is launched it will help executives to overview their businesses and discover the areas where they need to intervene and improve upon.

Thanks to the unique user interface you can overview any operations and processes in your company, recognize the areas where the performance is under the accepted levels, and find the reasons behind the differences so you can find the best solutions needed to improve.

Integrate it with your ERP!

VisualBI data analytics can be directly integrated with the most popular ERP and retail solutions and with the help of the data integration tool it can be easily connected to any other softwares.

Built-in tools to help decision making

There are many built-in tools and analytic templates (i.e.: ABC analysis) in our application to help the decision making process easier for our executive users so they can evaluate a problem from more angles.

Have your own Business Advisor!

We have integrated an industry specialized know-how and expertise into our VisualBI solution, which not only helps you discover potential problems but also offers specific solutions for them!

Experienced development team

Our company has many different data analytics solutions which helped in many industries to our clients with different needs and data structures.

Award Winning Technology

VisualBI is based on an award winning technology which brings you the easiest ways to access data and generate reports. With our solution you can save report templates but in only a few simple steps you can fully customize your current report to discover new insights into your company.

To Make Complex Executive Decisions Easier

VisualBI helps executives to oversee their companies and departments in one look which gives them valuable information on where they need to intervene. From this Overview mode you can drill down to more and more precise graphs and even to database level. With the built-in What-if-scenario function you can then visualize and project your data into the future and see the projected consequences of your actions.

Clear design. Clear mind

VisualBI is designed to align with the decision making process of the human mind so that our users can see more than just databases or graphs - they can see exactly what they need to see in their current stage of decision making. This helps our users to make their decisions quicker and see through complex problems more easily.
